Schriber found a memory aid to the various triplet combinations by humming things like "dee-dum-dum" to himself for the "up" quark, "dum-dee-dee" for the "down" antiquark, and "dum-dum-dum" for the positron, and therefore called them "dums" and "dees," upon which his students promptly coined "tweedle" for the general term, and much to the chagrin of the custodians of scientific dignity these versions came to be adopted through common usage by the rest of the world's scientific community, who soon tired of reciting "nigini-nigiar" and the like to each other. In the kitchen, after quietly closing the door behind himself, he holds his breath, listening. The house is. Pernak tossed up his hands. "I've been to take a look at their university and what they do there. You wouldn't believe it. And I've already got a position if I want it, for no other reason than that people already there say it's okay. You get a house, for nothing . . . a good one. Or they'd build you one however you want it. How can you say no? We're going to become Chironians. And so will everybody else when they've gotten over the voyage. Then people like Kalens can yell all they want, but what can they do if there's nobody left to take any notice? It's as I said-you have to start thinking like Chironians." Noises in his wake suggest that the killers are trying to track him. Contentious voices quickly arise as the. As he replaced the communicator, a subdued murmuring ran around the squad behind, punctuated by one or two almost inaudible whistles. Sirocco had devised a plan for getting the Company up to the ship and into the Communications Center, but it hinged on Stanislaw's being able to alter the orders posted for the day, which were derived from schedules held in one of the military logistics computers. Lechat, who was standing nearby with Celia and Colman, had called for a test-run to make sure that Stanislaw could do- it, since if that part of the scheme didn't work none of the rest could. Sirocco had suspended the briefing to resolve the issue there and then. "Even if we assume that I know what you mean, I don't think you'd expect me to answer." So now they both knew, and knew that the other knew. Each had tested the other's discretion, and both of them respected what they had found. Nothing more needed to be said. . . . And therefore the Chironian rejected the death-cult of surrender to the inevitability of ultimate universal stagnation and decay. Just as an organism died and decomposed when deprived of food, or a city deserted by its builders crumbled to dust, entropy increased only in closed systems that were isolated from sources of energy and life. But the Chironian universe was no longer a closed system. Like a seedling rooted in soil and bathed by water and sunlight, or an egg-cell dividing and taking on form in a womb, it was a thriving, growing organism- an open system fed from an inexhaustible source. . . . Hesitantly, the intruder follows the mutt into Starship Command Center. . . . Reminded of Donella, he worries about her welfare. What might have happened to her among all the. CHAPTER TWENTY-SIX. The mention of antimatter reminded Colman of something. He sat back on the sofa and cast his mind back as he tried to pinpoint what. It reminded him of something Kath had said. The others stopped talking and looked at him curiously. And then it came to him. He cocked his head to one side and looked at Bernard. "Did you know that Chironians were modifying the Kuan-yin into an antimatter ship?" he asked. . . . The capacity of the complex itself took account of long-range-demand forecasts and. more than outstripped the current requirements of the industries scattered around the. general area. Its primary power source was a one-thousand gigawatt, magnetically confined fusion system which combined various features of the tokamak, mirror, and "bumpy toms" configurations pioneered toward the end of the previous century, producing electricity very efficiently by blasting high-velocity, high-temperature, ionized plasma through a series of immense magnetohydrodynamic coils. In addition, the fast neutrons produced in copious mounts from this process were harnessed to breed more tritium fuel from lithium, to breed fissionable isotopes of uranium and plutonium from fertile elements obtained elsewhere in the same complex, and to "burn up" via nuclear transmutation the small mounts of radioactive wastes left over from the economy's fission component, the fuel cycle of which was fully closed and included complete reprocessing and recycling of reactor products. . . . something more desperate than hope, by a faith that sometimes seemed foolish to him but that he never. her baroque conversational games.
